

Fountain House CSAT TCE-TAC e-Supported Sobriety and Recovery E-ACCESS Program Evaluation Report

This report covers all program data received by the end of its first fiscal year July 31st 2014. The evaluator, SAE and Associates-Frank Guida, PhD, senior evaluator and Carrie Muchow, MA junior evaluator, inputs all GPRA data onto the SAIS database and onto an SPSS database for analysis. The data analysis provided in this report certainly informs the program on progress made thus far on meeting its outcome goals and objectives. The data are presented to the program's staff, and ultimately will be used to justify the possible continuation of the program in the final sustainability process. There have been no problems encountered in conducting the evaluation.

	Target	Actual	Rate	All Other Grantees
Intakes	100	100	100%	79.3%
6-Month F/Us	01	01	100%	51.2%

The E-ACCESS program has now completed its first year of a three-year award. The program will screen 780 clients and serve 300 clients from August 1, 2013 through July 31, 2016. The program has enrolled 100 clients as of July 31st from the target number of 100 (100%). The average percent targeted enrollment for all TCE-TAC grantees is 79%. The program's six-month follow-up rate is 100%. The average percent targeted six-month follow-up rate for all TCE-TAC grantees is 51%. The program is well ahead of the other programs in the Intake and 6-month follow-up key performance statistics.

The table below provides a demographic analysis of the program's first 100 clients. A snapshot indicates that the majority of clients (65%) are male; 56% are minority, with a mean age of 47, with an average 12.7 grades completed (75% of clients have at least a high school diploma). Seventy-one percent (71%) of clients report having no children. A very high percentage of clients (69%) report living in their own apartment. Only a small majority of clients (31%) are disabled, 27% report working part-time. Only 6% of clients are veterans of the military. Eighty-six percent of clients have been tested for HIV. Five percent (5%) of clients are on parole or probation. Sixty-two percent (62%) of clients have experienced some violence in the past, with an average of 2.4 symptoms of PTSD. A good majority of clients (62%) regularly attend self-help groups, and 86% of clients have family support for their recovery. In addition, only 22% of clients report alcohol use in past 30 days, and 14% report illicit drug use. Fifty percent (50%) of clients report experiencing depression past 30 days, 56% experienced anxiety, 53% have problems with concentration, 20% of clients report hallucinations, and 91% of clients have taken psychotropic medications in past 30 days.

Thus far in the program's tenure only one client has completed a 6-month follow-up GPRA. At the next semi-annual report dependent t-test statistical analyses will document program performance on a number of GPRA substance abuse and behavioral health variables.
